

Bevantyo Satria Pinandhita

Software Engineer

bevansatria@gmail.com | <https://www.linkedin.com/in/bevansatria/> | <https://github.com/vanszs>

Skills

Languages: Python, TypeScript/JavaScript, Dart
Frameworks & Backend: FastAPI, Node.js, Flutter, Redis, PostgreSQL
Infrastructure & DevOps: Docker, Cloudflare, VPS, GitOps
AI-Augmented Development: LLM APIs, structured prompting, AI-assisted workflow automation
Blockchain: Solidity, Hardhat, Foundry

Experience

Full-Stack Web Developer Freelance, National Democratic Party — Surabaya, ID	Aug 2025 – Present
- Cut feature delivery time 40% by designing structured AI-augmented prototyping workflows while maintaining production-grade architecture and security. - Deployed VPS-based production infrastructure with Cloudflare, achieving 99.9% uptime (TypeScript, Next.js, Node.js, MySQL, Redis, Docker). - Engineered secure role-based admin platform with Redis-backed background jobs, enabling scalable async operations for election data management.	
Full-Stack Web & Flutter Developer, Surabaya City Government — Surabaya, ID	July 2025 - Aug 2025
- Delivered two production Flutter apps and web admin system in 2-week sprint with zero critical vulnerabilities (bcrypt, CSRF, rate limiting). - Reduced data sync latency 60% using optimized REST APIs and Socket.IO - Architected offline-first system with Riverpod state management and real-time sync, achieving 4.85/5 user satisfaction in pilot deployment.	
Software Engineer & IoT Intern, PT. IGS Indonesia — Surabaya, ID	Jan 2025 – July 2025
- Built Flutter mobile app, backend REST API endpoints, and web dashboard enabling seamless real-time integration across ESP32+LoRa IoT sensors, cloud backend, and client apps. - Developed full-stack IoT platform with ML pipeline, improving landslide detection accuracy 25% and cutting false alerts 43% vs baseline. - Deployed edge sensor networks and data pipelines on embedded hardware for continuous field monitoring with sub-second latency.	

Projects

Autonomous Drone Lead Developer, PIMNAS National Competition	Jan 2025 – Dec 2025
Built autonomous delivery drone with TensorRT-optimized computer vision and RTMP/FFmpeg streaming to Next.js VPS dashboard (ROS2, Jetson Nano).	
Autonomous Drone Lead Developer, KRTI FAIO Robotics National Competition	Jan 2025 – July 2025
Setup VPS with ROS2, CI/CD, and SSH tunneling enabling remote drone control, real-time telemetry, and team collaboration during national competition.	
Autonomous Ship Team President, KKCTBN & KKI National Robotics Competition	Nov 2022 – Dec 2025
Led ASV robotics team to 2nd-place finishes at KKCTBN 2023 and KKI 2024 by designing a TensorRT-optimized computer-vision navigation stack for autonomous maritime operations.	

Education

Bachelor of Computer Science Universitas Pembangunan Nasional "Veteran" Jawa Timur (UPN Veteran East Java), Indonesia	2022 – 2026
