#Senior Vibe Coder | Blockchain Builder | ML & Robotics Engineer |
Community Manager in Web3 Ecosystems

Surabaya, East Java, Indonesia

Summary

Machine Learning Engineer, Full-Stack Developer, and Autonomous Systems Specialist with 3+ years building end-to-end intelligent solutions across AI, robotics, blockchain, and web technologies.

Technical Expertise:

- Machine Learning & AI: Python, TensorFlow, LLM integration, model optimization, computer vision
- Autonomous Systems: ROS2, path planning, sensor fusion, obstacle avoidance, Jetson Nano
- Full-Stack Development: Next.js, React, Flutter, TypeScript, secure backend architecture
- Emerging Tech: Blockchain (Solidity, Rust, Solana), IoT systems, real-time data processing

Recent Achievements:

- ✓ Engineered autonomous drone systems from ground up (ROS2 + Jetson Nano) with 99%+ collision avoidance accuracy, enabling real-time delivery mission planning
- ✓ Designed and delivered production-grade Flutter & Next.js applications within 2-week sprints for government contracts (4.85/5 user satisfaction rating)
- ✓ Built IoT-based computer vision system for early landslide detection, improving detection accuracy by 25% and reducing false alerts by 43%
- ✓ Led Autonomous Surface Vehicle (ASV) team to 2nd Place finish at KKI 2024 international maritime robotics competition, demonstrating technical leadership and system integration skills
- ✓ 3 peer-reviewed publications in algorithm optimization and AI/ML applications

What I Do: I specialize in translating complex technical challenges into scalable, production-ready solutions. Whether building intelligent autonomous systems, architecting full-stack applications, or designing AI-driven platforms, I approach each project with deep technical rigor, rapid iteration, and a focus on measurable impact.

Domains of Expertise: Machine Learning, Autonomous Systems, Full-Stack Development, Robotics, Blockchain, IoT, Computer Vision, System Architecture

Currently pursuing Bachelor of Computer Science (ML focus) at UPN Veteran Jawa Timur.

Always interested in: End-to-end technical challenges, ML/AI product roles, autonomous systems engineering, technical leadership opportunities, and innovative cross-functional projects.

Experience

BlockHood

11 months

Community Tech Lead

April 2025 - Present (11 months)

Founder

April 2025 - Present (11 months)

Discord

Discord Community Lead - Venimee (Youtuber) Discord Channel

June 2024 - Present (1 year 9 months)

1. Initiated and scaled a Discord-based community from zero, designing engagement workflows and fostering organic growth.
2. Recruited, trained, and managed a team of moderators with clearly defined roles to ensure operational efficiency.
3. Directed high-impact partnerships by evaluating opportunities and negotiating terms aligned with community goals.
4. Held full ownership of strategic direction, making key decisions on structure, culture, and daily governance.

Veteran Robotics | UPN Veteran Jawa Timur

1 year

Autonomous Drone Solo Programmer - PIMNAS 2025

January 2025 - December 2025 (1 year)

Surabaya

- Engineered and configured a complete autonomous drone system, including the setup of the ROS2 development environment on Ubuntu.
- Developed and implemented advanced path-planning and collision avoidance algorithms, integrating Particle Swarm Optimization (PSO) for route optimization and Optimal Reciprocal Collision Avoidance (ORCA) for real-time dynamic object avoidance during package delivery missions.
- Built and deployed a full-stack web application using Next.js to serve as a control and monitoring dashboard, fully deployed on a Virtual Private Server (VPS) for remote access.

- Integrated the autonomous drone system with the web interface to enable seamless operation and monitoring for package delivery expeditions.
- Strategically utilized an AI agent to accelerate the solo development workflow, while ensuring hands-on quality control to maintain robust, high-quality, and reliable code.

Autonomous Drone (VTOL) Solo Programmer - KRTI 2025

January 2025 - October 2025 (10 months)

Surabaya, East Java, Indonesia

- Designed and implemented an end-to-end autonomous drone system, managing the entire project from hardware setup on the Jetson Nano to complete software development.
- Developed a full software stack using ROS2 Foxy on Ubuntu 20 for real-time drone control, navigation, and mission execution.
- Integrated and configured MAVLink and MAVLink Router communication protocols to ensure a stable and reliable data stream between the drone and the ground control station.
- Engineered a multi-sensor fusion system, integrating ultrasonic, magnetometer, and computer vision sensors to enhance obstacle detection capabilities and navigational accuracy.
- Established a secure remote operation framework by configuring a Virtual Private Server (VPS) with a reverse tunnel, enabling remote monitoring and control.
- Leveraged an AI agent as a programming assistant, which significantly accelerated the development workflow and enabled the successful solo completion of this complex project.

Partai Nasional Demokrat

AI-Augmented Full Stack Developer

August 2025 - November 2025 (4 months)

- Reduced development timeline by 40% by utilizing AI-assisted prototyping tools (Lovable AI) for initial landing page design and rapid iteration

- Engineered custom admin panel with election data aggregation, CRUD operations for program management, and role-based access control
- Implemented Redis-based background job processing system, optimizing application performance and enabling scalable async operations
- Deployed and maintained production infrastructure on VPS with Cloudflare integration, ensuring 99.9% uptime and optimized content delivery

Pemerintah Kota Surabaya

1 month

Solo Flutter Developer

July 2025 - July 2025 (1 month)

Surabaya, East Java, Indonesia

- Build the end-to-end development of two complete Flutter applications, delivering them from concept to production in an accelerated 2-week timeframe.
- Boosted development efficiency by leveraging AI tools (ChatGPT & GitHub Copilot) for code generation and automating CI/CD pipelines with GitHub Actions, cutting release time by 40%.
- Architected a robust offline-first system using Riverpod state management, ensuring seamless app functionality and data availability even with intermittent network conditions.
- Integrated real-time data synchronization via RESTful APIs and Socket.IO, which successfully reduced data latency by 60% and improved reporting accuracy.
- Designed an intuitive and modern UI/UX with Material Design 3, dynamic themes (dark/light), and Lottie animations, achieving a high pilot user satisfaction rating of 4.8/5.
- Ensured exceptional application stability by conducting comprehensive unit tests and rigorous code reviews, resulting in zero crashes in the initial production release.

Solo Full-Stack Web Developer

July 2025 - July 2025 (1 month)

Kota Surabaya, East Java, Indonesia

- Developed and deployed a full-stack admin dashboard solo in 2 weeks using Next.js (App Router), TypeScript, and React, leveraging AI-assisted tools (ChatGPT, Copilot) to accelerate development while ensuring production-grade code quality.
- Architected a highly secure backend with Next.js API Routes and MySQL, implementing multi-layered security including bcrypt password hashing, HMAC-signed sessions, SQL injection/CSRF protection, and login rate-limiting.
- Implemented a granular Role-Based Access Control (RBAC) system for four distinct user roles (superadmin, admin1, admin2, petugas), enforced via Next.js middleware to secure sensitive routes and data.
- Built a modular and scalable frontend architecture with reusable React components (MUI), utility-based abstractions (DB handlers, session utils), and mock data support for robust offline testing.
- Designed cross-platform API compatibility to seamlessly support two Flutter mobile applications (warga & petugas), ensuring consistent authentication and session management.

PT. IGS Indonesia Group

7 months

Flutter Developer

January 2025 - July 2025 (7 months)

Kota Surabaya, East Java, Indonesia

- Developed a responsive and performant Flutter-based mobile application for landslide detection, ensuring an optimal user experience.
- Designed and implemented an intuitive user interface (UI) and user experience (UX) for the landslide detection app, focusing on real-time visualization of IoT sensor data.
- Integrated the Flutter application with IoT devices via APIs, enabling efficient collection and processing of sensor data for early landslide potential detection.
- Implemented state management (e.g., Provider, BLoC) within the Flutter application to ensure effective data handling and synchronization with data from IoT devices.

Machine Learning & IOT Developer

January 2025 - July 2025 (7 months)

Surabaya, East Java, Indonesia

ArcalisAI

6 months

AI Engineer

January 2025 - May 2025 (5 months)

- Developed and implemented AI systems, managing models like GPT and DeepSeek.
- Trained and optimized AI models for enhanced performance.
- Integrated AI APIs such as OpenAI and OpenRouter for seamless operations.
- Ensured optimal model performance through hyperparameter selection and fine-tuning.

Blockchain Developer

December 2024 - May 2025 (6 months)

- Developed smart contracts using Solidity for blockchain-based applications.
- Designed & implemented Rust-based Solana migration contracts to enhance project scalability and performance.
- Led the tech team in the end-to-end development of the entire project, ensuring efficient execution and deployment

CARV

Community Moderator

December 2023 - May 2025 (1 year 6 months)

Singapore

- Managed game night events, resolved support tickets, hunted bugs, and facilitated member interactions at Carv.
- Provided meticulous oversight of community activities, ensuring smooth user experiences.
- Collaborated with colleagues to enhance community engagement and support.
- Developed skills in community management, event coordination, and technical issue resolution.

Seeds

5 months

Community Lead

December 2024 - April 2025 (5 months)

Jakarta, Indonesia

- Managed partnerships with Web3 communities on revenue-sharing mechanisms through platforms like Discord and Telegram.

- Published regular posts in social sections to ensure community engagement and value delivery.
- Actively participated in discussions to strengthen community trust and foster a collaborative environment.

Digital Marketing Specialist

December 2024 - April 2025 (5 months)

Jakarta, Indonesia

- Managed and updated a question bank for Bank Soal Management, ensuring accuracy and error-free inputs.
- Produced and published two high-quality articles weekly in English and Indonesian, addressing market trends.
- Collaborated on market awareness campaigns, focusing on market updates and stock recommendations to attract potential clients.

Blockchain Developer

December 2024 - February 2025 (3 months)

Jakarta, Indonesia

- Developed and deployed code for a decentralized marketplace on the Diamante blockchain network.
- Implemented core marketplace features such as NFT minting, listing, buying, and selling mechanisms.
- Conducted extensive testing and optimization to ensure secure and efficient contract functionalities.

Bangkit Academy led by Google, Tokopedia, Gojek, & Traveloka Machine Learning Cohort

August 2024 - December 2024 (5 months)

Remote

- Developed advanced skills in Python, TensorFlow, Generative AI, and GANs through a comprehensive ML curriculum at Bangkit Academy.
- Designed and deployed an IoT-based Computer Vision system, achieving a 25% improvement in detection accuracy.
- Played a critical role in data collection, model optimization, and embedded system integration, delivering a prototype that enhanced production efficiency for SMEs.

Veteran Robotics | UPN Veteran Jawa Timur Autonomous Ship Team President 2022-2024

November 2022 - November 2024 (2 years 1 month)

Surabaya

- Led the ASV team division in the robotics community to secure second place in the prestigious KKCTBN 2023 and KKI 2024 championships.
- Developed innovative designs and advanced technology to push the boundaries of autonomous maritime technology.
- Collaborated with Puspresnas to showcase the forefront of robotics in maritime applications.

BEM Fakultas Ilmu Komputer UPN "Veteran" Jawa Timur

1 year

Research and Development Staff | Bidang Penelitian dan Pengembangan

2023 - April 2024 (1 year)

Surabaya, East Java, Indonesia

Event Organizer Chairman "Fasilkom Talk #4"

2023 - 2024 (1 year)

Surabaya

- Orchestrated the offline seminar 'Fasilkom Talk #4' on Artificial Intelligence and Data Science, fostering intellectual growth and professional development.
- Brought together participants to explore the transformative impact of AI and Data Science, providing hands-on engagement with technological advancements.

Vice Event Coordinator "Loka Karya"

2023 - 2023 (less than a year)

Surabaya

- Coordinated the planning and execution of a comprehensive Python programming and Machine Learning workshop, ensuring seamless logistics and effective communication.
- Contributed to the success of the event by creating an engaging learning environment, empowering participants with valuable insights.
- Aligned with the company's commitment to advancing technological proficiency within the academic community.

Event Organizer Chairman "Fasilkom Talk #3"

2023 - 2023 (less than a year)

Surabaya

- Organized and coordinated 'Fasilkom Talk #3' online seminar on AI and Data Science for BEM Fasilkom, engaging participants in insightful discussions.
- Facilitated a forum for intellectual growth and professional development, exploring the transformative impact of cutting-edge technologies.
